

GypWall Twin Frame Braced

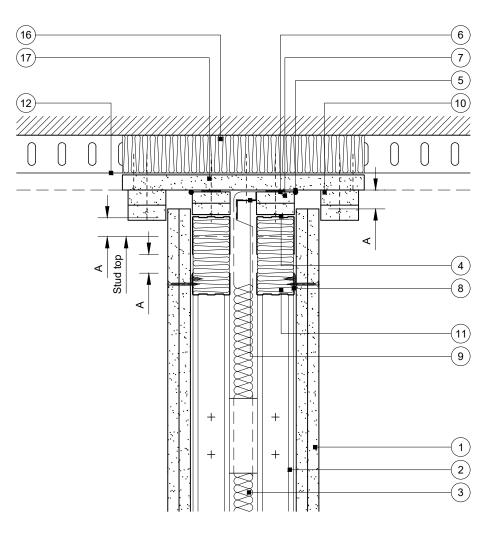

- 1 Two layers Gyproc plasterboard or Glasroc specialist board fixed with suitable British Gypsum screws at 300mm centres (200mm centres at external angles)
- Two lines of Gypframe 'C' studs at specified centres cross braced with Gypframe 99 FC 50 Fixing Channel at 1200mm centres (staggered by 600mm between stud pairs for heights over 2400mm) fixed to each stud with two suitable British Gypsum wafer head screws
- 3 Isover insulation where required
- 4 Gypframe Deep Channel or Extra Deep Channel (see table) suitably fixed through board to fixing strap or soffit at 600mm centres
- 5 Gyproc Sealant for optimum sound insulation

- 6 Gyproc FireStrip
- 7 One or two channel width strip(s) of board (see table). Two strips pre-fixed to channel with suitable British Gypsum screws at 600mm centres
- 8 Gypframe Channel noggings with ends notched around studs and fixed with suitable British Gypsum wafer head screws, to receive uppermost board fixings (no fixings into head channel)
- 9 Gypframe steel angle or timber batten suitably fixed to channel to retain insulation where required
- Two 50mm width strips of Glasroc F FireCase fixed through board to fixing strap or soffit with suitable fire resistant fixings at 600mm centres, or Gypframe GA4 Steel Angle bedded on bead of Gyproc Sealant and fixed through board to fixing strap or soffit with suitable fire resistant fixings at 600mm centres (see table)
- 11 Stone mineral wool 33kg/m³ minimum density by others
- 12 Profile sheet decking
- 13 20mm Glasroc F FireCase suitably fixed to soffit at 150mm centres (min. 50mm overlap on soffit)
- 14 Gypframe GFS1 Fixing Strap suitably fixed to soffit with pairs of fixings at 600mm centres
- 15 Fire resistant sealant manufactured and supplied by others
- 16 Suitable fire stopping material by others (see important information)
- 17 Packer of 20mm Glasroc F FireCase suitably fixed to soffit

Important information

Fire resistance BS EN 1364-1

- 90 or 120 minutes through partition subject to specification
 Estimated 90 or 120 minutes room to room through junction
- Estimated 90 or 120 minutes room to room through junction subject to partition specification

Performance is based on maintaining compartmentation through the British Gypsum partition up to the line of the abutting structural element. This is on the basis the structural element has at least the equivalent fire resistance performance to that of the partition. The drawing should be approved by the project design and management authority before use to ensure that it meets with their specific project requirements

Performance characteristics of the British Gypsum system must be maintained. It is important that a suitable fire stopping product with appropriate fire resistance substantiation is sought from a third party manufacturer
