
PRODUCT UPDATE 5th JUNE 2023

GYPROC DRIWALL ADHESIVE COLOUR CHANGE

We have recently developed our Gyproc DriWall Adhesive recipe to improve our production and supply capabilities.

Due to the rock sources available to us at each production plant you may notice differences with some of the material you receive. The colour of the adhesive could be pink, the texture may be slightly grittier, and you may possibly notice a difference in the smell. Customers reported the colour resembling that of a finish plaster.

Extensive internal testing and customer trials prior to launch confirm that this raw material change means that the high-quality performance and usability of Gyproc DriWall Adhesive that our customers have come to expect is retained.

Lead times and stock levels will **not** be affected by any changes.
