

## GypWall Shaft

- 1 Two layers Gyproc plasterboard or Glasroc specialist board fixed with suitable British Gypsum screws at 300mm centres (200mm centres at external angles)
- 2 19mm Gyproc CoreBoard or 20mm Glasroc F FireCase
- 3 Gyproframe 'I' studs (tabbed 'I' studs for 146mm) at specified centres
- 4 Gyproframe Retaining Channel
- 5 Isover insulation where required
- 6 Gyproframe Extra Deep Channel ('J' Channel for 62mm) suitably fixed through board to fixing strap or soffit at 300mm centres (at 600mm centres in two lines staggered by 300mm for 94mm and 148mm channels)
- 7 Gyproc Sealant for optimum sound insulation
- 8 Gyproc FireStrip
- 9 One or two channel width strip(s) of board (see table). Two strips pre-fixed to channel from underside with suitable British Gypsum screws at 600mm centres
- 10 Uppermost board fixing to studs
- 11 Two or three firestops (see table) 36/46/68/122mm width (to suit 60/70/92/146mm studs) cut from 19mm Gyproc CoreBoard or 20mm Glasroc F FireCase, installed between studs and fixed to channel with two suitable British Gypsum screws
- 12 Gyproframe steel angle or timber batten suitably fixed to channel to retain insulation where required
- 13 Two 50mm width strips of Glasroc F FireCase fixed through board to fixing strap or soffit with suitable fire resistant fixings at 600mm centres, or Gyproframe GA4 Steel Angle bedded on bead of Gyproc Sealant and fixed through board to fixing strap or soffit with suitable fire resistant fixings at 600mm centres (see table)
- 14 Profile sheet decking
- 15 15mm Glasroc F FireCase suitably fixed to soffit at 150mm centres (min. 50mm overlap on soffit)
- 16 Gyproframe GFS1 Fixing Strap suitably fixed to soffit with pairs of fixings at 600mm centres
- 17 Fire resistant sealant manufactured and supplied by others
- 18 Suitable fire stopping material by others (see important information)
- 19 Packer of 15mm Glasroc F FireCase suitably fixed to soffit

### Important information

- Fire resistance BS EN 1364-1
- 60 minutes through partition subject to specification
  - Estimated 60 minutes room to room through junction subject to partition specification

Performance is based on maintaining compartmentation through the British Gypsum partition up to the line of the abutting structural element. This is on the basis the structural element has at least the equivalent fire resistance performance to that of the partition. The drawing should be approved by the project design and management authority before use to ensure that it meets with their specific project requirements

Performance characteristics of the British Gypsum system must be maintained. It is important that a suitable fire stopping product with appropriate fire resistance substantiation is sought from a third party manufacturer
