

Product data sheet

Gyproc® Control Joint

Gyproc Control Joint is a pre-formed galvanised metal strip.

Where to use

Use it to form lateral joints in drywall systems to accommodate expansion and contraction of up to 7mm.

Product information

Composition

This product is made from galvanised steel.

Width (mm)

47.

Lengths available (mm)

3048.

Colour

Steel.

Performance

Here we only provide performance information related to the product. Please see the White Book online for system-dependent performance.

Installation guidance

Cutting

Measure and cut bead with appropriate tin snips.

Fixing

When using Gyproc Control Joint there should be a gap between the boards of about 12.5mm.

Push the control joint into the gap (with the "V" shape going into the gap and the perforated metal flush on the board surface) then suitably fix along each edge.

The face of the board can be plastered up to the lip on the control joint so that the perforated metal is covered. The "V" shaped gap can be filled with a flexible filler. This gap must not be plastered or jointed over. Finally, finish the surface with paint if preferred.
