Technical Specification

This document provides guidance on how to achieve performance and warranty requirements by exclusively using British Gypsum products or system specifications.

British Gvo

Head design

GypWall Single Frame

A206254 (B) MR2 (EN)

the cavity. For heights up to 7800mm.

Head channel	Gypframe 148 DC 60 Deep Flange Floor & Ceiling Channel	
Gypframe channel suitably fixed to soffit at 600mm centres in two lines staggered by 300mm.		
Deflection allowance	Vertical deflection only. To be determined by a Structural Engineer.	
Dropped soffit	For principles of deflection head construction refer to detail ST-121-Z1L2-09.	

Framework

Stud	Gypframe 146 S 50 'C' Stud	
Stud centres - Max (mm)	600	
Abutments and openings	Gypframe 146 S 50 'C' Stud	
Gypframe 'C' stud suitably fixed to structure at 600mm centres in two lines staggered by 300mm.		
Base channel	Gypframe 148 DC 60 Deep Flange Floor & Ceiling Channel	

Gypframe channel suitably fixed to floor at 600mm centres in two lines staggered by 300mm.

Insulation

Insulation, Layer 1 50mm Isover Acoustic Partition Roll (APR 1200)		Insulation, Layer 1	
--	--	---------------------	--

Board and fixings

Board side 1, Layer 1	Gyproc FireLine 15mm	Screws side 1, Layer 1	British Gypsum Drywall Screws 25mm
Board side 1, Layer 2	Gyproc FireLine MR 15mm	Screws side 1, Layer 2	British Gypsum Drywall Screws 40mm
Board side 2, Layer 1	Gyproc FireLine 15mm	Screws side 2, Layer 1	British Gypsum Drywall Screws 25mm
Board side 2, Layer 2	Gyproc FireLine MR 15mm	Screws side 2, Layer 2	British Gypsum Drywall Screws 40mm

Board laver 1 (inner), fix securely to Gypframe metal supports around the perimeter of the board at maximum 300mm centres: Board laver 2 (outer), fix securely to all Gypframe metal supports around the perimeter of the board and intermediate stud positions at maximum 300mm centres. External corners reduce fixings to 200mm. All joints staggered between layers. Fix working from the centre of each board. Position screws not less than 13mm from cut edges and 10mm from bound edges of boards. Set screw heads flush with plasterboard surface; do not break paper or gypsum core.

Fixing strap	Gypframe GFS1 Fixing Strap

Used to support horizontal board joints in face layer of multiple layer board linings and enable board screw fixing at 300mm centres.

Gyproc Sealant Sealant

Locate sealant at junctions with adjoining structure and other air paths. Apply as a continuous bead to clean, dry, dust-free surfaces, leaving no gaps. After application of sealant, bulk fill gaps between floor and underside of plasterboard using Gyproc joint compound.

Finish coat

To achieve the specified performances, the system should be finished using either one of our Thistle or ThistlePro plasters, or Gyproc jointing products. See the product range guides on the British Gypsum website for more information. For further guidance on skimming moisture resistant grade boards see the White Book - Finishes section.

Technical Specification

This document provides guidance on how to achieve performance and warranty requirements by exclusively using British Gypsum products or system specifications.

GypWall Single Frame A206254 (B) MR2 (EN)

Inner layer of Gyproc FireLine 15mm and an outer layer of Gyproc FireLine MR 15mm each side of Gypframe 146 S 50 'C' Studs at 600mm centres. 50mm Isover Acoustic Partition Roll (APR 1200) in the cavity. For heights up to 7800mm.

British Gvos

System performance

Please read performance data with any associated standards.

Fire integrity (mins)	120	Fire insulation (mins)	120
Maximum height (mm)	7800		

The maximum heights quoted are limited by the fire state field of application or by limiting deflection of L/240 at 200 Pa, whichever is the lower of the two.

Sound insulation (Airborne) Rw (dB)	51
Duty rating	Severe
Partition thickness (mm)	208
Approx. weight (kg/m2)	46

Standards

These standards relate to the above performance data.

BS EN 1364-1, Fire resistance tests for non-loadbearing elements - Walls.

BS 5234-2, Specification for performance requirements for strength and robustness including methods of test.

BS EN ISO 140-3, Acoustics - Measurement of sound insulation in buildings and of building elements. Laboratory measurement of airborne sound insulation of building elements.

Further information

SpecSure® system performance warranty confirms that British Gypsum proprietary systems will perform as specified for the lifetime of the building. The SpecSure® warranty requires that all components are specified in full and constructed in accordance with British Gypsum's installation guidance. For more details see the British Gypsum website. Always check with the design team before making any changes to the chosen specification, ensuring appropriate substantiation is sought to confirm that the solution still meets all required project performances.

Technical Support Team | british-gypsum.com

This Technical Specification stipulates all British Gypsum products used within a system. These must be used to achieve the stated performance and the **SpecSure**® system warranty.
