

# Gyptone BASE 33

## Product Data Sheet

### Introduction

Gyptone BASE 33 is a gypsum acoustic ceiling plank used in conjunction with the **CasoLine quick lock** Corridor system. It can be used either as a standalone ceiling system, or combined with Gyptone perforated planks to achieve a desired aesthetic design. Once installed, the system can be rapidly disassembled to provide full and unrestricted access to the ceiling cavity.

### Product description

Gyptone BASE 33 comprises an unperforated 12.5mm gypsum core. The planks are available in lengths of 1800mm, 2100mm or 2400mm with an acoustic fleece on the reverse side. Long edges are tegular E15, and short edges are A edge. As with all products in the Gyptone range, Gyptone BASE 33 is supplied with **ACTIVair** technology as standard, which absorbs and converts formaldehyde into non-harmful inert compounds.

### Board Performance

#### Sound absorption

Gyptone BASE 33 is an unperforated ceiling system and is not intended to provide any level of sound absorption. Where there is a requirement for sound absorption as a means of achieving reverberation control, refer to Gyptone QUATTRO 55, POINT 15 OF LINE 8 planks.

#### ACTIVair technology

Though we don't notice them, impurities such as VOCs are often present in the air we breathe - emitted from furniture, carpets and building materials. Long-term exposure to these can potentially cause health problems and reduce general well-being. Clean air, on the other hand, can speed up patient recovery in hospitals, reduce absence at work, and increase pupils' concentration at school. **ACTIVair** is our latest technology designed specifically to convert formaldehyde, a common VOC, into non-harmful inert compounds, removing up to 70% of the formaldehyde concentration in the indoor air. This clever technology continues to work over 50 years, and whilst alternative solutions absorb formaldehyde, they don't decompose like **ACTIVair** risking re-emission at a later date.

*Formaldehyde reduction is based on experimental data following ISO16000-23 standards from 0.4m<sup>2</sup> to 1.4m<sup>2</sup> installed/ m<sup>2</sup> room. Lifetime is based on a calculation assuming constant formaldehyde reduction with indoor formaldehyde concentration of 25µg/m<sup>3</sup> for ceiling, drywall or combined drywall and ceiling configurations.*

#### Declaration of Performance

Declaration of Performance is available for download from [british-gypsum.com](http://british-gypsum.com)

#### Physical properties

Dimensions	1800mm x 300mm 2100mm x 300mm 2400mm x 300mm
Thickness	12.5mm
Perforated area	0%
Edge type	A, E15
Colour	White NCS 500
Reaction to fire	A2-s1, d0
Weight (approx)	9kg.m <sup>2</sup>
Moisture resistance	Up to 70% RH

---

## Application and installation

### Handling and storage

Gyptone planks should be stored flat on a level surface and protected from dampness. To avoid damage to the special acoustic tissue bonded to the back face, Gyptone planks should not be pulled over the edges of the stack of boards below.

### Jointing and finishing

Gyptone planks can be cut to length on site using a standard blade. Refer to the British Gypsum Ceilings Installation Guide for further details.

### Fixtures

Gyptone planks must not be subjected to additional load. Lights and similar fixtures must be separately hung from wires or fixed to independent loadbearing structures.

### Environment

Gyptone planks are unsuitable for use in areas subject to continuously damp or humid conditions above 70% RH, or in elevated temperatures consistently above 49°C. Where higher levels of moisture resistance are required, refer to the British Gypsum Eurocoustic range of ceiling tiles.

### Recyclability

The gypsum core of Gyptone tiles is 100% recyclable. **CasoLine** quick lock grid and components are also 100% recyclable.

Date of previous version: first edition.

---

## Product standards

All British Gypsum ceiling products are manufactured under management systems which have been independently audited and certified as conforming with *ISO 9001: 2001*. All Gyptone products conform to *EN 14190: 2014* Gypsum plasterboard from reprocessing - requirements and test methods.

---

## Maintenance

Gyptone tiles can be repainted if required, using a short haired roller and suitable matt emulsion paint. The paint should not be applied with a spray diffuser as this will impair the acoustic performance.

---

## Warranty

Gyptone **BASE 33** is covered by British Gypsum's SpecSure® lifetime system warranty. SpecSure® confirms British Gypsum systems will perform to the parameters published in our current literature for the period of time that the system is used for its originally designed purpose. Systems must be specified and installed in line with the current British Gypsum White Book, and comprise only genuine branded British Gypsum components.
