Gyproc FireLine
Product Data Sheet

Introduction
Used in British Gypsum partition, wall lining and ceiling systems to give increased fire protection. Also used for protection to structural steel.

Product description
Gypsum plasterboard with glass fibre and other additives in the core. Gyproc FireLine consists of an aerated gypsum core with glass fibre and other additives encased in, and firmly bonded to, strong paper liners. Gyproc FireLine is a plasterboard that is suitable for drylining internal surfaces. This plasterboard is one of the products within our plasterboard range that is certified to BES 6001 achieving a rating of ‘Very Good’.

Board performance

Fire protection
Plasterboard linings provide good fire protection owing to the unique behaviour of the non-combustible gypsum core when subjected to high temperatures. The inclusion of glass fibre and other additives in the core of Gyproc FireLine improves its fire protective properties when compared with standard plasterboard. For the purposes of the national Building Regulations, plasterboard is designated a ‘material of limited combustibility’ (Approved Document B). The surfaces of Gyproc FireLine are designated Class 0 (for the purposes of national Building Regulations). Please refer to the table below.

Effect of condensation
The thermal insulation and ventilation requirements of national Building Regulations aim to reduce the risk of condensation and mould growth in new buildings. However, designers should take care to eliminate all possibility of problems caused by condensation, particularly in refurbishment projects.

Board colour
- Pink face paper
- Brown reverse side paper

Board printing
Face - screw centre markings ‘x’.
Edge - product code, EAN number, board thickness x width x length, edge type.
Reverse - standard and certification

Thermal conductivity
- Gyproc FireLine - 0.24W/mK

Effect of temperature
Gyproc FireLine is unsuitable for use in areas subject to continuously damp or humid conditions, i.e. above 70% RH unless intermittent and must not be used to isolate dampness. Plasterboards are not suitable for use in temperatures above 49°C but can be subjected to freezing conditions without risk of damage.

Application and installation

General
It is important to observe appropriate health and safety legislation when working on site i.e. personal protective clothing and equipment, etc. The following notes are intended as general guidance only. In practice, consideration must be given to design criteria requiring specific project solutions.

Handling
Manual off-loading of this product should be carried out with care to avoid unnecessary strain. For further information please refer to the Manual Handling section of the Site Book or Manual Handling Guide, available to download from www.british-gypsum.com.
Application and installation

Cutting
This product may be cut using a plasterboard saw or by scoring with a sharp knife and snapping the board over a straight edge. Holes for switch or socket boxes should be cut out before the boards are fixed using a utility saw or sharp knife. When cutting boards, power and hand tools should be used with care and in accordance with the manufacturers’ recommendations. Power tools should only be used by people who have been instructed and trained to use them safely. Appropriate personal protective equipment should be used.

Fixing
Fix boards with decorative side out to receive joint treatment or a skim plaster finish. Lightly butt boards together. Never force boards into position. Install fixings not closer than 13mm from cut edges and 10mm from bound edges. Position cut edges to bound edges. Cut edges and 10mm from bound edges. Position cut edges to the centre line of framing where this supports board edges or ends.

Plastering
The face (pink) of Gyproc FireLine can be plastered with either Thistle Board Finish or Thistle Multi-Finish. There should be a minimum delay between completion of the lining and the commencement of plastering.

Jointing
Gyproc jointing materials produce durable joint reinforcement and a smooth, continuous, crack-resistant surface ready for priming and final decoration. A number of jointing specifications are available to suit the board type, method of application, and site preference.

Decoration
After the joint treatment has dried, decoration, including any decorator’s preparatory work, should follow with the minimum delay.

Product standards

Type F: Gypsum plasterboard with improved core adhesion at high temperatures.

Plasterboard with a face to which suitable gypsum plasters or decoration may be applied. These boards have mineral fibres and/or other additives in the gypsum core to improve core cohesion at high temperatures.

Maintenance

Repair
Minor damage - Gently sanded the surface to remove burrs and fill flush with Gyproc Easi-Fill or Gyproc Easi-Fill 45, or two applications of Gyproc Joint Cement. When dry, apply Gyproc Drywall Primer or Gyproc Drywall Sealer to leave the surface ready for decoration.

Deep indents resulting from impact - Check the plasterboard core to ensure that it is not shattered. If intact, apply a coat of Gyproc Joint Filler, or Gyproc Easi-Fill or Gyproc Easi-Fill 45, followed by the procedure for repairing minor damage as outlined above, once set / dry.

Damaged core and / or broken edges (non-performance situations only) - Remove the damaged area of core. Score the liner approximately 10mm away from the sound plaster surrounding the damaged area, and peel the paper liner away. Apply Thistle GypPrime or PVA to seal the core and surrounding liner. Bulk fill the hole with a stiff mix of Gyproc Easi-Fill or Gyproc Easi-Fill 45, or Gyproc Joint Filler, and strike off flush. Apply Gyproc Easi-Fill or Gyproc Easi-Fill 45, or two applications of Gyproc Joint Cement, once the filler is set / dry. When dry, apply Gyproc Drywall Primer or Gyproc Drywall Sealer (only suitable in non-performance situations).

Extensive damage - When the damage is more extensive, it may be necessary to replace that area of plasterboard. It is important that the replacement board is of the same type as specified and installed. Cut out the affected area back to the nearest framing member. Replace the plasterboard, accurately cutting and screw fixing the same type and thickness of plasterboard. Fill edge joints, then tape and finish in the recommended way. Treat the finished surface with Gyproc Drywall Primer or two coats of Gyproc Sealer, if previously specified for vapour control purposes. Redecorate as required.
